# BILLY FARROLL

WEB DESIGNER & DEVELOPER

A passionate and enthusiastic coder who loves both sides of design and development. An individual who can identify a problem and develop solutions to resolve issues as, if and when they arise. Someone who is confident in leading projects, collaborating well with others to achieve an overall goal or work individually to create fresh new ideas. Experienced with building and maintaining client relationships, ensuring that each task undertaken focuses on meeting the clients expectations and wishes.

EXPERIENCE

• STRAWBERRY MARKETING `2017-present`

In my time at Strawberry Marketing Ltd I have been involved with graphic design, web development and web design tasks. Working alongside clients from the early stages of agreeing a strategy and product that they want, through to assisting them anyway they need after the new product has been launched. I also hold meetings with our clients to make sure we have their best interests at heart and they feel comfortable working with us. My work is divided evenly between front-end development, design work and marketing our services.

• ASCESIS MEDIA `2016`

For Ascesis Media I was doing my internship. My main responsibilities were liaising with the team to create beautiful products together, Work with new and contemporary designs, front-end development on ongoing projects they were currently involved in and building strategic marketing plans for their networking. This taught me a great deal about teamwork within an in-house agency and what it's like to collaborate with various individuals with their own unique skills.

EDUCATION

• BOURNEMOUTH UNIVERSITY `2014-2017`

I studied BA (Hons) Digital Media Design at Bournemouth University. I achieved a 2:1 grade after my time here. This course focused mainly on front and back-end development, teaching us how to present in front of very large audiences, to collaborate with others, meet deadlines, work under pressure and introduced us to the latest technologies. The course also consisted off a heavy amount of design planning, testing and approaching. To see how we could handle certain problems that may occur when dealing with real-time situations.

• BROCKENHURST COLLEGE `2011-2013`

At Brockenhurst College I studied Computing & IT. I achieved a Distinction Distinction Merit (DDM) grade. This course was very good at teaching an individual about all the components of a computer, both hardware and software. Giving you the insight to what a computer requires to work to full capability.

• NOADSWOOD SCHOOL `2007-2011`
